

MAC Spec Workbook Version to FDOT Contract Let Dates Crosswalk

This crosswalk will assist project personnel in determining which MAC Supplemental Spec workbook version will be assigned to their contract based on the let date. There is not a MAC Spec for every FDOT workbook. So the MAC Spec Workbook version may not match the contract workbook exactly on every MAC Spec. For example, a contract let on 05/2013 with FDOT Supplemental Specification Section 160 would have MAC Spec 160 2.x assigned to it. MAC Specs are also versioned for changes within a workbook year. That is what the .x represents. When a MAC Spec is created for the first workbook, it is designated as 1.0. When that workbook version is revised, it becomes 1.1 and so on. When a new workbook version is created, it becomes 2.0. When a revision to that workbook is created, it becomes 2.1 and so on. **NOTE:** This only applies to the MAC Specs for FDOT Supplemental Specifications. Project Specific Specifications (Special Provisions, Technical Special Provisions, Developmental Specifications, Change Orders and Plan Notes) are assigned on a project by project basis and do not take the contract let date into account.
